

LEAFCLIP FOR THE MEASUREMENT OF PLANT ABIOTIC STRESS

Measurements in the greenhouse or in the laboratory

Measurements in the field or in the biotope

- Chlorophyll content
- Epidermal flavonol content
- Crop nitrogen status (NBI)
- Anthocyanin index (optional)

- Geolocated measurements
- Chlorosis detection
- Water stress indicator
- UV-Visible light indicator

¹ Chlorophyll content in $\mu\text{g}/\text{cm}^2$

² Epidermal flavonol content in absorbance units

TECHNICAL SPECIFICATIONS

Sample measured	Leaf
Parameters measured (measurement method)	Chl : chlorophyll content in µg/cm ² (transmittance) Flav : epidermal flavonol content in absorbance units (screening effect on fluorescence) NBI : nitrogen status [Optional] Anth : anthocyanin index (screening effect on fluorescence)
Positioning Relative accuracy	Internal GPS < 2,5 m (CEP, 50%, 24 h static)
Area measured Leaf thickness Measurement time Storage capacity Data sorting Error	5 mm diameter 1 mm maximum < 500 ms 10,000 multiparametric data 3 levels (measurement, group, file) ±5%
Operating temperature	From 5 to 45 °C
Light sources Detectors	5 LED : 1 UV-A, 1 green, 1 red, 2 near infrared 1 silicon photodiode
Data transfer	USB cable
Battery Autonomy Charge time	Li-ion rechargeable 10 hours 4 hours
Total weight	220 g
Languages	English, French and Spanish
